

# The Schiedel Prefabricated Chimney

- Chimney system constructed off site in factory quality conditions to EN1457 and EN12446.
- Quick and easily lifted into place on site.
- Minimal on site assembly.
- Prefabricated chimney stack.
- Back to back version does not break party wall.
- Suitable for open fires, gas fires, stoves and pellet stoves.

# The Schiedel Prefabricated Chimney

To complement the popular Swift Chimney System Schiedel has developed a prefabricated chimney system that can be lifted into a house in sections rather than assembling the chimney on site.

The chimney can be delivered to site in 3 sections and lifted into position with a crane or tele-porter as required.

The sections are securely connected together with anchor bolts that also keep the chimney plumb & level.

The chimney is completed with a prefabricated chimney stack that fits neatly over the chimney blocks.
