Complete your next power-flush in half-the-time

REMOVES SLUDGE AND HARDENED DEPOSITS

The *VibraClean* precision-made radiator agitator liberates sludge, hardened deposits and blockages eliminating the need to remove a radiator ever again.

Made in the UK

PROFESSIONAL HEATING SOLUTIONS

# VibraClean®

## Quality power-flushing in half-the-time

Power-flushing technology is now accepted as best practice by central heating professionals for system cleaning, maintenance and long-term protection.

Leading independent heating solutions manufacturer ADEY has pioneered the benefits of power-flushing with the introduction of the *MagnaCleanse® RapidFlush Filter*. Now, the technology has been taken a step further with the arrival of *VibraClean®*, the precision-made radiator agitator that eliminates the need to remove a radiator ever again.

Designed especially for the professional central heating market, used in conjunction with the *MagnaCleanse RapidFlush Filter*, the new *VibraClean* brings immediate benefits:

- Saves time - Reduces the power-flushing process by up to 50%
- Simple and effective to use
- Low cost - A small investment for a large return
- No maintenance
- Compatible with all SDS drills
- Proven results

Tests have shown that using *VibraClean* alongside the *MagnaCleanse RapidFlush Filter* not only speeds up the process, but contributes significantly to a higher quality power-flush. It removes more sludge in 20 seconds than 30 minutes of operation without *VibraClean*.

A professional power-flush on an existing system can take up to eight hours. While a four-hour, or indeed, a two-hour commissioning power-flush is better than none at all, it is now possible using *VibraClean* with the *MagnaCleanse RapidFlush Filter* to halve the eight-hour process.

### Put *VibraClean* to work for you

Discover a more **effective** and **time-saving** way to deliver your next power-flush in half-the-time. Ask your supplier about *VibraClean* TODAY or call **01242 546700 NOW**

## Shift blockages in half-the-time - It's easy

1

Place *VibraClean* into standard SDS drill

2

Set the drill to hammer only mode with no rotary action

3

Engage and maintain the *VibraClean* head flat against the radiator

4

Operate *VibraClean* along the base of each radiator for 10-20 seconds or as required
