AQUALISA

Axis®

Axis[®]

Fresh lines, fresh thinking. The Axis shower collection from Aqualisa lives up to its looks, delivering water at constant temperature all the time, every time.

Axis[®] Digital

Axis Digital is an advanced one-touch system that takes showering into the 21st century.

Totally unique, Axis Digital is powered by a small processor, about the size of a shoe-box, which can be concealed almost anywhere nearby. It can be installed under a bath, in an airing cupboard, or loft space, for example. As the unit doesn't take up valuable space in the shower area, Aqualisa has been able to create remarkably sleek, contemporary shower controls and fittings. You can find out more about our digital technology on page 11.

Axis[®] Thermo

Aqualisa's Axis Thermo shower is based on a traditional shower system and features the same precision-made bi-metallic cartridge we have been using since 1977. We may be known for our innovation, but we keep using it because it has never been bettered. This is the original tried, tested and trusted system which has helped Aqualisa build its long-standing reputation for quality and durability.

The Axis Thermo shower is easy to install, and provides a reliable and powerful flow of water at safe temperatures.

Axis[®] taps

Aqualisa's range of Axis taps complete the picture. Precision-made, with solid-brass fittings and a distinctive domed design, they complement the look, feel and quality of the Axis shower collection. Which means you can create a complete, integrated look for your bathroom, where every detail counts.

Aqualisa has a history of leading through innovation which has led to our long-standing reputation for quality products and first-class service.

Axis[®]

Digital

Just one touch to start and stop the shower.

The flashing lights hold steady when the desired temperature is reached, so it's very easy and safe for everybody to use.

The processor is located away from the shower, so you don't have to damage your décor to install the ultra-slim controls.

Where beauty meets brains. Aqualisa can create such trim, understated designs because of the unique way our digital technology works behind the scenes.

Boost option is only available on pumped models.

Switched on.
You can activate
your Axis Digital
shower using a
button positioned
outside the showering
area or bathroom.
Ingenious.

Mix and match the Axis Digital range to create your perfect shower.
Check page 10 for names, dimensions, codes and prices.
There's a five-year guarantee on all Axis Digital products.

Fixed or adjustable height shower heads can be combined with the Axis Thermo control.

You can easily add a booster pump to the Axis Thermo system if you need a more powerful jet of water.

Mix and match the Axis Thermo range to create your perfect shower. Check page 10 for names, dimensions, codes and prices. There's a three-year guarantee on all Axis Thermo products.

Axis[®]

Thermo

Stylish, non-slip controls will glide smoothly at your fingertips.

The Axis Thermo from Aqualisa is the original high performance, safe shower system.

Behind the contemporary styling is a durable piece of engineering which has stood the test of time.

Optional body jets add a further touch of luxury to your showering experience.

Select between the shower head and/or body jets with our diverter switch.

Our technology inside ensures water temperature remains constant, regardless of water use elsewhere in the house.*

Digital technology

Hot and cold water is blended by the Axis Digital processor to your required temperature. The processor, about the size of a shoe-box, can be hidden up to 7 metres* from the wall control, in an airing cupboard, under the bath or even in the ceiling space directly above. The thermostatically controlled, blended water is then delivered safely to the shower head.

*A 10 metre cable is available on request. Product code 254602.

The Axis Digital standard processor is for use on a combination boiler or a mains fed system, where high water flow is assured.

The Axis Digital pumped processor is for use on a gravity water system as it incorporates a built-in pump for extra power.

Axis body jets are compatible with some Axis Digital installations. Please call our customer helpline on 01959 560010 for further details.

Thermo technology

Aqualisa's bi-metallic Thermo technology is easy to install, long lasting and provides a high flow rate of thermostatically controlled water. Thermo technology is compatible with virtually all approved UK domestic water systems.

A combination boiler or a mains fed system will give power shower performance, while a separate booster pump can be added to Axis Thermo for extra power on a gravity system.

Do you need a pump?

If you have a gravity water system, the performance of your Axis Thermo shower can be enhanced by adding a booster pump. Choose either boost, medium, high or super boost depending on the size of your water tank and how powerful you want your shower to be.

Using a booster pump on a gravity system can also enable you to add Axis body jets

See page 12 to identify your water system.

Identify your water system

Gravity system

A cold water tank usually located in the roof space, and a hot water cylinder, frequently in the airing cupboard. This system sometimes has a pump in the circuit.

Combination boiler

These systems heat your water as you use it and usually consist of a boiler attached to a wall, often in the kitchen.

Mains fed system (Unvented hot water system)

A high-pressure cylinder of water, heated by a boiler or immersion heater. Provides high volumes of water.

Axis[®]

Taps

Bath, basin or wall mounted, there's an Axis tap to meet every possible need.

They're beautiful on the inside too, meticulously made from solid brass.

Guaranteed for three years, these elegant taps will bring a sophisticated finishing touch to any bathroom.
