

Cleanflow

Air Cleaner

FEATURES

Cleanflow Air Cleaner

A highly efficient, electronically enhanced media.

Cleanflow Principle

Attracts dust, smoke, pollen and other air pollutants.

Cleanflow Concept

Polarises the filter media.

Principle Ensures

No Ozone is produced.

Retro Fitted Kits Available

For all our air heaters.

Easy Maintenance

Full access to all components.

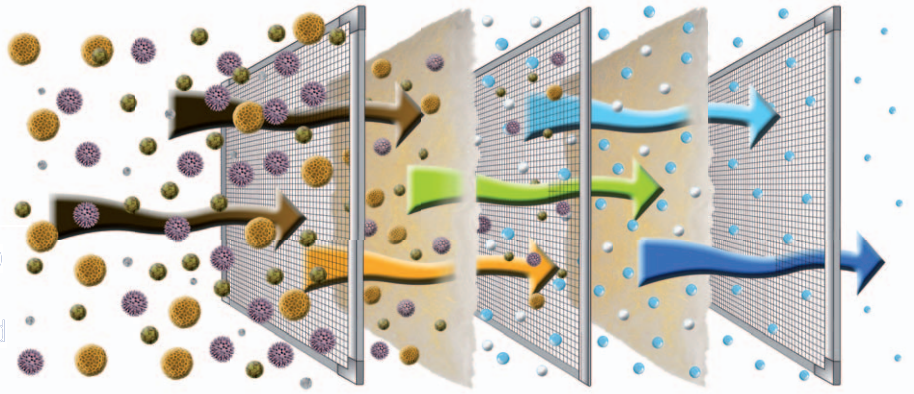

RELIABILITY YOU CAN TRUST

Cleanflow Principle

FEATURES

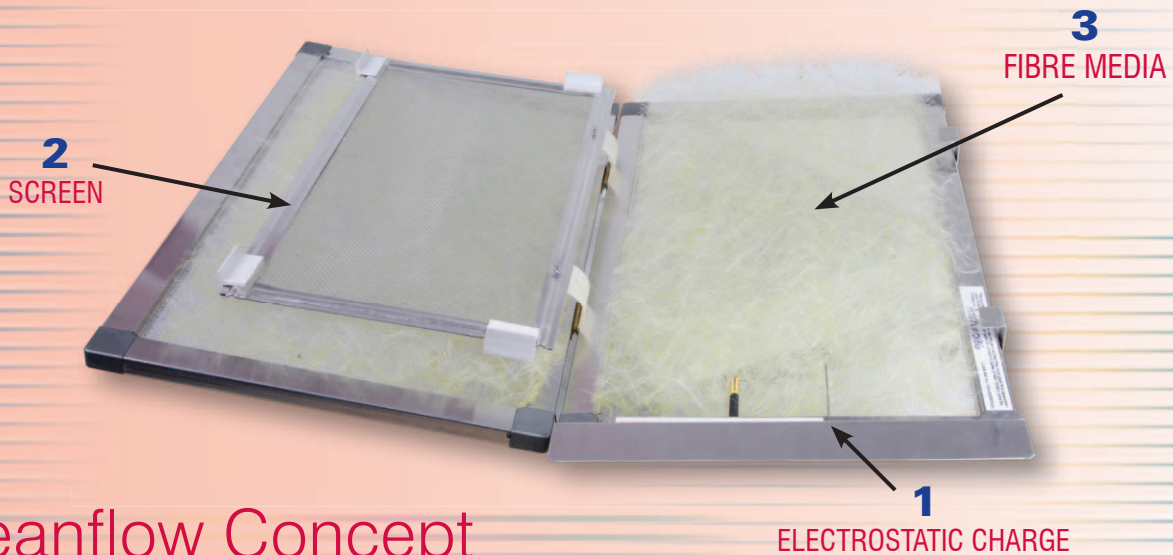

When your air heater is operating on maximum load, all of the air within the dwelling passes across the air filter 6 times per hour.

This presents the perfect opportunity to electronically clean the air and remove smaller particles such as pollen, mould and tobacco smoke.

Cleanflow Media

The Cleanflow media is polarised and thereby the particles are attracted to it. Any particles that are not caught by the media have no polarised charge so will not adhere to soft furnishings or walls, and will be caught on subsequent passes.

Cleanflow Concept

The electronic screen 2 is charged and in turn polarises the filter media 3. Particles are then attracted to, and captured within the media pads.

Cleanflow Benefits

Cleanflow creates a clean healthy indoor environment and is particularly beneficial to bronchial sufferers.

Cleanflow will remove 95% of particles down to 1 micron. The illustration alongside shows various particles magnified 1000 times.

Cleanflow Electronic Air Cleaner is only available from Johnson & Starley Ltd.
