

Domestic boilers with aluminium heat exchangers 01/08/11

NOTE:- This list is *NOT* exhaustive. It is produced from boiler manufacturers' information as published in magazine surveys. Boiler manufacturers may change specifications, and you should always check the material of the heat exchanger directly with the boiler manufacturer if you have any doubt.

If a boiler has an aluminium heat exchanger, the system should be power flushed with HYPER-FLUSH, and not POWER FLUSH FX2. Aluminium is a very reactive metal, and will suffer some attack from water that is even slightly acidic or alkaline, and this is why a neutral flushing chemical, HYPER-FLUSH, should be used.

| Manufacturer | Model | Heat exchanger material (✓ = aluminium) |
|-----------------------|---|---|
| ACV UK | Prestige 47 / 64 / 85 | ✓ |
| | Current models | None |
| Aga Rayburn | Rayburn 480CD | ✓ |
