4S4042  
Concealed thermostatic  
dual control shower  
£447.12

Strata basin mixers have a unique single lever cut out control with a textured undersurface which provides a sure grip and allows accurate flow adjustment even when wet.

Strata basin mixers also have a 'flow straightener' device which enables the direction of the water flow to be adjusted from the vertical position. It can be angled away from or towards the back of the basin bowl and is therefore ideal for use with basins where the shape of the bowl makes a vertical waterflow unsuitable.

## BODY JETS

Invigorating, revitalising jets are designed for the complete multi functional showering system. Choice is the key factor to deciding your own specification via independent jets or the vertical bars. Available in packs of 4.

4S4521

Waterfall body jet with diffuser.

£330.00

4S4522

Waterfall body jet with nebuliser.

£330.00

## WALL UNIONS

To complement the range of shower valves and shower kits Francis Pegler has designed a range of three wall unions to provide a co-ordinated showering package. All the wall unions are male to male 15mm connections.

4S4528

Waterfall square wall union

£57.00

4S4529

Waterfall modern wall union

£36.00

4S4530

Waterfall minimalist wall union

£46.00

# PLUMBING SYSTEMS

'Mixer' showers blend hot water (usually from a stored supply) and cold water (usually direct from mains supply). Your choice of Francis Pegler shower and installation procedure will vary according to the type of water system, illustrated opposite are the most common domestic water systems found in your home.

Francis Pegler's range of showers have been designed to operate on all these systems subject to the correct minimum operating pressure (Minimum operating pressures are shown by product in the brochure). It is important that the correct minimum operating pressure is available for the shower valve and shower head to operate correctly.

## WIDE CHOICE OF SHOWER VALVES

Francis Pegler thermostatic showers are available in "concealed" (recessed into the wall) or "exposed" (wall mounted) shower valve controls and the new Francis Pegler range has no less than 28 models incorporating both dual control and single sequential shower valves.

## THERMOSTATIC OPERATION AND SAFETY

The workings of the Francis Pegler mixer showers is by mixing together hot and cold water to the desired showering temperature (thermostatically controlled they maintain the required temperature when other water appliances are being used in the home) and have a built in safety shut down for cold water failure. All models are supplied with "flow limiters" which allow safe connection to unbalanced and high pressure water systems.

## DUAL CONTROL

Dual Control means that through the use of two simple to use control levers the shower temperature and flow are controlled separately. This allows the user to control the flow of the shower from full force to a relaxing flow while retaining their ideal water temperature for showering. The showers are thermostatically controlled with factory pre set maximum temperatures to avoid scolding and makes these new Francis Pegler showers ideal for use by those wanting to have the ultimate control of the shower.

## SINGLE SEQUENTIAL

Single Sequential control means that through the use of one simple to use control lever the shower temperature and flow is controlled. The showers are thermostatically controlled with factory pre set maximum temperatures to avoid scolding and makes these new Francis Pegler showers ideal for use by the young, the elderly and the less able.

## SHOWER VALVE SERVICING & MAINTENANCE

Francis Pegler thermostatic showers are designed for low maintenance and can be serviced with minimum disruption to your water system.

## GUARANTEES AND APPROVALS

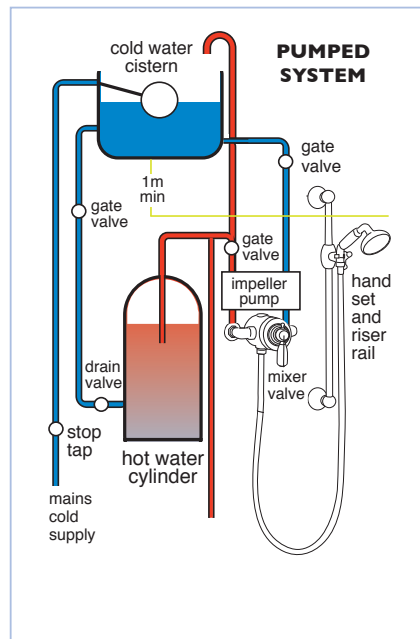

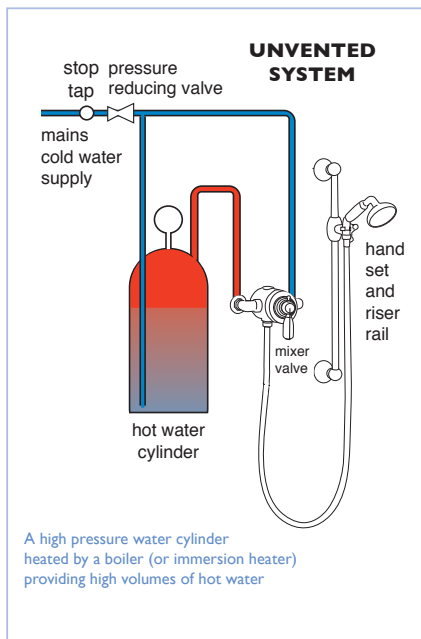

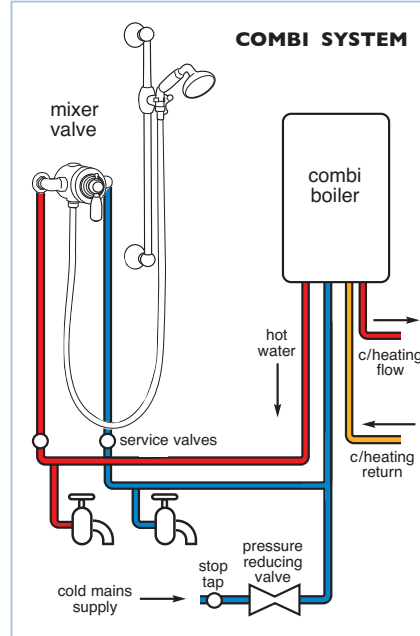

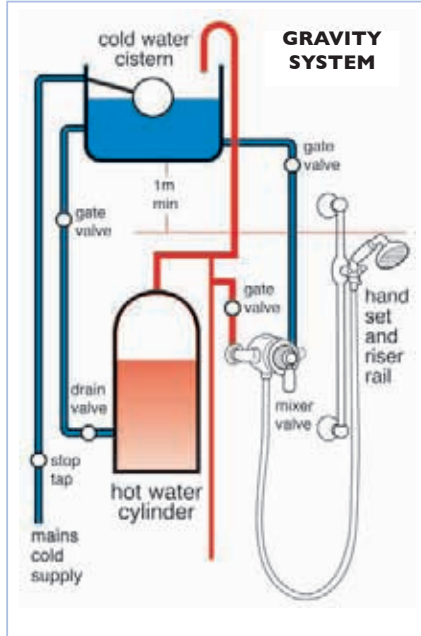

Francis Pegler thermostatic showers are covered by a 5 year guarantee against all manufacturing defects (excluding damage caused by incorrect fitting or misuse). Francis Pegler Shower Heads are covered by a 1 year guarantee against all manufacturing defects (excluding damage caused by incorrect fitting or misuse).

Francis Pegler thermostatic showers have been designed in accordance with the UK water regulations (subject to correct installation) and the British Standards.

Note: Check with your installer for confirmation of shower suitability, installation to the existing water supplies, and minimum operating pressure of the shower prior to purchase or contact Francis Pegler Technical Dept on tel: **0800 156 00 50**

Showers are guaranteed for 5 years from date of purchase. Full guarantee details available on request.
